DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, 12-16, 19, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Watanabe (US 6,325,537).

With regards to claims 1, 9, and 15, Watanabe disclose a method for image reconstruction for images acquired in a non-isocentric path (Fig. 9), said method comprising: varying a distance between an object and at least one of a detector and a source to form a virtual isocenter (Col. 3 Lines 55-64; Col. 4 Lines 31-37); maintaining an object at said virtual isocenter during imaging of said object (Col. 3 Lines 17-18); normalizing a magnification change in image data obtained as said virtual isocenter is maintained (Col. 3 Lines 63-64); and reconstructing an image of said object based on said image data and said normalized magnification change (Col. 4 Lines 7-8; Col. 4 Lines 46-48).

With regards to claims 2 and 10, Watanabe disclose a method further comprising tracking a position of said detector and a position of said object (Col. 3 Lines 29-31).

Application/Control Number:

10/689,339 Art Unit: 2882

With regards to claim 3, Watanabe disclose a method wherein said varying step further comprises varying said distance between image exposures (Col. 9 Lines 7-20).

With regards to claims 4 and 12, Watanabe disclose a method further comprising determining a distance between said detector and a source (Col. 3 Lines 55-59).

With regards to claims 5, 13, and 16, Watanabe disclose a method further comprising determining a position of at least one of said detector and a source with respect to said object (Col. 3 Lines 25-27).

With regards to claims 6 and 19, Watanabe disclose a method further comprising mounting said detector 16 and a source 12 on a C-arm 14 (Fig. 2).

With regards to claims 7 and 14, Watanabe disclose a method further comprising moving said C-arm in a non-circular path to move said detector and said source around said object while varying said distance between said detector and said object (Col. 3 Lines 29-31; Col. 6 Lines 24-26).

With regards to claim 8, Watanabe disclose a method wherein said reconstructing step further comprises reconstructing a three-dimensional image of said object based on said image data and said normalized magnification change (Col. 1 Lines 63-64).

With regards to claim 20, Watanabe disclose a system further comprising a positioning device for positioning said object with respect to said support (Col. 3 Lines 60-64).

Application/Control Number:

10/689,339 Art Unit: 2882

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 11, 17, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watanabe (US 6,325,537) as applied to claim 10 above, and further in view of Habraken et al. (US 2001/0031039).

With regards to claims 11, 17, and 18, Watanabe disclose a method as recited above in claim 10. Watanabe fail to teach a method wherein said tracking system comprises an electromagnetic tracking system for determining a position of said detector with respect to said object. Habraken et al. teach a method wherein said tracking system comprises an electromagnetic tracking system for determining a position of said detector with respect to said object (Abs.). It would have been obvious to one of ordinary skill in the art, at the time of invention to modify the invention of Watanabe to include a method wherein said tracking system comprises an electromagnetic tracking system for determining a position of said detector with respect to said object, in order to prevent collisions between movable parts (Abs. Lines 2-3; Fig. 1 note: 16 and 18).

Response to Arguments

Applicant's arguments with respect to claims 1, 9, and 15 have been considered but are most in view of the new ground(s) of rejection.

10/689,339 Art Unit: 2882

New reference Watanabe (US 6,325,537) discloses the above recited limitations.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patent(s) are cited to further show:

Hsieh (US 6,295,331)

(378/4)

- Smoothing to the data as a distance from an isochannel increases
- Weighting factor where the distance from a point in the image to the x-ray source
- Magnification factor is defined as a ratio of a distance from source to detector, over a distance of source to isocenter

Lewis, Jr. et al. (US 6,816,625)

(382/275

Correct or change magnification differences

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander H. Taningco whose telephone number is (571) 272-8048. The examiner can normally be reached on Mon-Fri 8:00-4:30 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ed Glick can be reached on (571) 272-2490. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
